# 1 LINE FOLLOWER

## 1.1 Tasks:

1. Write the program to control the robot follow the line ( actually above the edge between black and white area ). Some programming hints you can find in prog. 1 :

**Program 1:** Line Follower.

```
#include "RobotMovingFunctions.h"
const int LIGHT_SENSOR_PIN = A0;
const int SURFACE_BRIGHTNESS_REFERENCE = 400;

void setup()
{
  setIOpins();
  pinMode(LIGHT_SENSOR_PIN , INPUT);
}

void loop()
{
  int light_sensor_value = analogRead(LIGHT_SENSOR_PIN );
  if ( light_sensor_value < treshold_value )
  {
    // do this if robot is over the black line

  }
  else
  {
    // do this if robot is over white area

  }
}
```

## 1.2 Questions:

1. What is the program function to get the `light_sensor_value`?
2. Determine the movements of the robot if the robot is over the black area and if the robot is over the white area.
