1 LINE FOLLOWER

1.1 Tasks:

1. Write the program to control the robot follow the line (actually above the edge between black and white area). Some programming hints you can find in example:

Program 1: Simple line-follower program.

```
void robotForward();
void robotStop();
void robotLeft();
void robotRight();
void robotBackward();
void setIOpins();

void setup() {
  setIOpins();
}

void loop()
{
  int light_sensor_value = analogRead(LIGHT_SENSOR_PIN );
  if ( light_sensor_value < treshold_value ){
      // do this if robot is over the black line

  } else {
      // do this if robot is over white area

  }
}
```

1.2 Questions:

1. What is the program function to get the `light_sensor_value`?
2. Determine the movements of the robot if the robot is over the black area and if the robot is over the white area.

1.3 Summary:

1.3.1 <++>

<++>

1.4 Issues:

1.4.1 <++>
